Biomechatronics in Medical Rehabilitation: Biomodelling, Interface, and Control

Shane Xie, Wei Meng

Biomechatronics in Medical Rehabilitation: Biomodelling, Interface, and Control Shane Xie, Wei Meng

This book focuses on the key technologies in developing biomechatronic systems for medical rehabilitation purposes. It includes a detailed analysis of biosignal processing, biomechanics modelling, neural and muscular interfaces, artificial actuators, robot-assisted training, clinical setup/implementation and rehabilitation robot control.

Encompassing highly multidisciplinary themes in the engineering and medical fields, it presents researchers' insights into the emerging technologies and developments that are being utilized in biomechatronics for medical purposes.

Presenting a detailed analysis of five key areas in rehabilitation robotics: (i) biosignal processing; (ii) biomechanics modelling; (iii) neural and muscular interfaces; (iv) artificial actuators and devices; and (v) the use of neurological and muscular interfaces in rehabilitation robots control, the book describes the design of biomechatronic systems, the methods and control systems used and the implementation and testing in order to show how they fulfil the needs of that specific area of rehabilitation. Providing a comprehensive overview of the background of biomechatronics and details of new advances in the field, it is especially useful for researchers, academics and graduates new to the field of biomechatronics engineering, and is also of interest to researchers and clinicians in the medical field who are not engineers.

From reader reviews:

Alvin Maltby:

In this 21st millennium, people become competitive in every way. By being competitive currently, people have to do something to make themselves survive, being in the middle of the actual crowded place and notice by surrounding. One thing that oftentimes many people have underestimated the item for a while is reading. Sure, by reading an e-book your ability to survive enhances then having a chance to stand than others is high. To suit your needs who want to start reading any book, we give you this specific Biomechatronics in Medical Rehabilitation: Biomodelling, Interface, and Control book as a beginner and daily reading guide. Why, because this book is usually more than just a book.

Alejandra Dunlap:

The knowledge that you get from Biomechatronics in Medical Rehabilitation: Biomodelling, Interface, and Control is a more deep you searching the information that hide inside the words the more you get thinking about reading it. It doesn't mean that this book is hard to know but Biomechatronics in Medical Rehabilitation: Biomodelling, Interface, and Control giving you enjoyment feeling of reading. The article author conveys their point in specific way that can be understood by means of anyone who read that because the author of this e-book is well-known enough. This particular book also makes your own personal vocabulary increase well. That makes it easy to understand then can go together with you, both in printed or e-book style are available. We advise you for having that Biomechatronics in Medical Rehabilitation: Biomodelling, Interface, and Control instantly.

Arnold Williams:

Playing with family in the park, coming to see the ocean world or hanging out with friends is thing that usually you will have done when you have spare time, and then why you don't try issue that really opposite from that. Just one activity that make you not sensation tired but still relaxing, trilling like on roller coaster you already been ride on and with addition of information. Even you love Biomechatronics in Medical Rehabilitation: Biomodelling, Interface, and Control, you could enjoy both. It is good combination right, you still desire to miss it? What kind of hang-out type is it? Oh can happen its mind hangout folks. What? Still don't buy it, oh come on its known as reading friends.

James Horowitz:

Reading a book make you to get more knowledge from the jawhorse. You can take knowledge and information originating from a book. Book is written or printed or outlined from each source that will filled update of news. On this modern era like at this point, many ways to get information are available for you actually. From media social similar to newspaper, magazines, science book, encyclopedia, reference book, story and comic. You can add your understanding by that book. Do you want to spend your spare time to spread out your book? Or just seeking the Biomechatronics in Medical Rehabilitation: Biomodelling,

Interface, and Control when you essential it?
