Searching for Dark Matter with the ATLAS Detector (Springer Theses) Steven Schramm

This thesis describes the search for Dark Matter at the LHC in the mono-jet plus missing transverse momentum final state, using the full dataset recorded in 2012 by the ATLAS Experiment. It is the first time that the number of jets is not explicitly restricted to one or two, thus increasing the sensitivity to new signals. Instead, a balance between the most energetic jet and the missing transverse momentum is required, thus selecting mono-jet-like final states.

Collider searches for Dark Matter have typically used signal models employing effective field theories (EFTs), even when comparing to results from direct and indirect detection experiments, where the difference in energy scale renders many such comparisons invalid. The thesis features the first robust and comprehensive treatment of the validity of EFTs in collider searches, and provides a means by which the different classifications of Dark Matter experiments can be compared on a sound and fair basis.

From reader reviews:

Carol Frazier:

The book Searching for Dark Matter with the ATLAS Detector (Springer Theses) can give more knowledge and information about everything you want. So just why must we leave the great thing like a book Searching for Dark Matter with the ATLAS Detector (Springer Theses)? A few of you have a different opinion about guide. But one aim which book can give many data for us. It is absolutely proper. Right now, try to closer with your book. Knowledge or details that you take for that, it is possible to give for each other; you could share all of these. Book Searching for Dark Matter with the ATLAS Detector (Springer Theses) has simple shape however, you know: it has great and large function for you. You can look the enormous world by available and read a reserve. So it is very wonderful.

Marian Perkins:

Nowadays reading books be than want or need but also turn into a life style. This reading habit give you lot of advantages. Associate programs you got of course the knowledge the particular information inside the book which improve your knowledge and information. The data you get based on what kind of guide you read, if you want have more knowledge just go with training books but if you want sense happy read one with theme for entertaining including comic or novel. The particular Searching for Dark Matter with the ATLAS Detector (Springer Theses) is kind of book which is giving the reader erratic experience.

Muriel Colvard:

Are you kind of occupied person, only have 10 or perhaps 15 minute in your day to upgrading your mind skill or thinking skill possibly analytical thinking? Then you are experiencing problem with the book in comparison with can satisfy your limited time to read it because this all time you only find reserve that need more time to be learn. Searching for Dark Matter with the ATLAS Detector (Springer Theses) can be your answer as it can be read by you who have those short free time problems.

Stephen Comerford:

As a university student exactly feel bored to be able to reading. If their teacher inquired them to go to the library or even make summary for some e-book, they are complained. Just tiny students that has reading's heart or real their pastime. They just do what the educator want, like asked to the library. They go to right now there but nothing reading really. Any students feel that examining is not important, boring and can't see colorful photos on there. Yeah, it is being complicated. Book is very important for you. As we know that on this period of time, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. So , this Searching for Dark Matter with the ATLAS Detector (Springer Theses) can make you feel more interested to read.
