Health Systems Science Susan E. Skochelak, Richard E. Hawkins, Luan E Lawson, Stephanie R Starr, Jeffrey Borkan, Jed D Gonzalo

Developed by the American Medical Association's Accelerating Change in Medical Education Consortium, *Health Systems Science* is the first text that focuses on providing a fundamental understanding of **how health care is delivered, how health care professionals work together to deliver that care, and how the health system can improve patient care and health care delivery**. Along with basic and clinical science, Health Systems Science (HSS) is rapidly becoming a crucial "third pillar" of medical science, requiring **a practical, standardized curriculum** with an emphasis on understanding the role of human factors, systems engineering, leadership, and patient improvement strategies that will help **transform the future of health care and ensure greater patient safety**.

- **Complete coverage of the evolving field of HSS** includes patient safety, quality improvement, evidence-based medicine, value in health care, interprofessional teamwork, stewardship of health care resources, population management, clinical informatics, care coordination, leadership, and health care financing/reform.
- **Patient improvement strategies** incorporates checklists, information technology, team training, and more.
- A **consistent chapter template** provides clear coverage of each topic, including Learning Objectives, Chapter Outline, Core Chapter Content, Summary, Questions for Reflection, and Annotated Bibliography and References.
- **Highly relevant content** applicable to today's evolving health care delivery written by experts in key, emerging areas of HSS.
- **Developed in partnership with the AMA's Accelerating Change in Medical Education Consortium**, at the forefront of change and innovation in medical education.
