Lectures on Spaces of Nonpositive Curvature (Oberwolfach Seminars) Werner Ballmann
Singular spaces with upper curvature bounds and, in particular, spaces of nonpositive curvature, have been of interest in many fields, including geometric (and combinatorial) group theory, topology, dynamical systems and probability theory. In the first two chapters of the book, a concise introduction into these spaces is given, culminating in the Hadamard-Cartan theorem and the discussion of the ideal boundary at infinity for simply connected complete spaces of nonpositive curvature. In the third chapter, qualitative properties of the geodesic flow on geodesically complete spaces of nonpositive curvature are discussed, as are random walks on groups of isometries of nonpositively curved spaces. The main class of spaces considered should be precisely complementary to symmetric spaces of higher rank and Euclidean buildings of dimension at least two (Rank Rigidity conjecture). In the smooth case, this is known and is the content of the Rank Rigidity theorem. An updated version of the proof of the latter theorem (in the smooth case) is presented in Chapter IV of the book. This chapter contains also a short introduction into the geometry of the unit tangent bundle of a Riemannian manifold and the basic facts about the geodesic flow. In an appendix by Misha Brin, a self-contained and short proof of the ergodicity of the geodesic flow of a compact Riemannian manifold of negative curvature is given. The proof is elementary and should be accessible to the non-specialist. Some of the essential features and problems of the ergodic theory of smooth dynamical systems are discussed, and the appendix can serve as an introduction into this theory.

From reader reviews:

Wilhelmina Kane:

Have you spare time for the day? What do you do when you have more or little spare time? Yep, you can choose the suitable activity regarding spend your time. Any person spent their spare time to take a stroll, shopping, or went to typically the Mall. How about open or even read a book titled Lectures on Spaces of Nonpositive Curvature (Oberwolfach Seminars)? Maybe it is being best activity for you. You know beside you can spend your time together with your favorite's book, you can cleverer than before. Do you agree with their opinion or you have different opinion?

Scott Duran:

The book Lectures on Spaces of Nonpositive Curvature (Oberwolfach Seminars) gives you the sense of being enjoy for your spare time. You need to use to make your capable considerably more increase. Book can to get your best friend when you getting tension or having big problem using your subject. If you can make studying a book Lectures on Spaces of Nonpositive Curvature (Oberwolfach Seminars) to be your habit, you can get considerably more advantages, like add your own personal capable, increase your knowledge about a number of or all subjects. You may know everything if you like open and read a guide Lectures on Spaces of Nonpositive Curvature (Oberwolfach Seminars). Kinds of book are a lot of. It means that, science reserve or encyclopedia or others. So , how do you think about this e-book?

June Slater:

Reading a book can be one of a lot of activity that everyone in the world really likes. Do you like reading book so. There are a lot of reasons why people love it. First reading a reserve will give you a lot of new information. When you read a book you will get new information due to the fact book is one of many ways to share the information or even their idea. Second, looking at a book will make you actually more imaginative. When you reading through a book especially tale fantasy book the author will bring that you imagine the story how the figures do it anything. Third, you could share your knowledge to other people. When you read this Lectures on Spaces of Nonpositive Curvature (Oberwolfach Seminars), it is possible to tells your family, friends and also soon about yours publication. Your knowledge can inspire the others, make them reading a publication.

Timothy Quintero:

Many people spending their moment by playing outside using friends, fun activity having family or just watching TV the whole day. You can have new activity to spend your whole day by examining a book. Ugh, think reading a book really can hard because you have to bring the book everywhere? It ok you can have the e-book, bringing everywhere you want in your Smart phone. Like Lectures on Spaces of Nonpositive Curvature (Oberwolfach Seminars) which is having the e-book version. So , try out this book? Let's notice.
