Visual Information Retrieval using Java and LIRE (Synthesis Lectures on Information Concepts, Retrieval, and S) Mathias Lux, Oge Marques

Visual information retrieval (VIR) is an active and vibrant research area, which attempts at providing means for organizing, indexing, annotating, and retrieving visual information (images and videos) from large, unstructured repositories. The goal of VIR is to retrieve matches ranked by their relevance to a given query, which is often expressed as an example image and/or a series of keywords. During its early years (1995-2000), the research efforts were dominated by content-based approaches contributed primarily by the image and video processing community. During the past decade, it was widely recognized that the challenges imposed by the lack of coincidence between an image's visual contents and its semantic interpretation, also known as semantic gap, required a clever use of textual metadata (in addition to information extracted from the image's pixel contents) to make image and video retrieval solutions efficient and effective. The need to bridge (or at least narrow) the semantic gap has been one of the driving forces behind current VIR research. Additionally, other related research problems and market opportunities have started to emerge, offering a broad range of exciting problems for computer scientists and engineers to work on. In this introductory book, we focus on a subset of VIR problems where the media consists of images, and the indexing and retrieval methods are based on the pixel contents of those images -- an approach known as content-based image retrieval (CBIR). We present an implementation-oriented overview of CBIR concepts, techniques, algorithms, and figures of merit. Most chapters are supported by examples written in Java, using Lucene (an open-source Java-based indexing and search implementation) and LIRE (Lucene Image REtrieval), an open-source Java-based library for CBIR. Table of Contents: Introduction / Information Retrieval: Selected Concepts and Techniques / Visual Features / Indexing Visual Features / LIRE: An Extensible Java CBIR Library / Concluding Remarks

From reader reviews:

Nancy Hedrick:

Book is to be different per grade. Book for children until eventually adult are different content. As you may know that book is very important for us. The book Visual Information Retrieval using Java and LIRE (Synthesis Lectures on Information Concepts, Retrieval, and S) had been making you to know about other understanding and of course you can take more information. It is quite advantages for you. The e-book Visual Information Retrieval using Java and LIRE (Synthesis Lectures on Information Concepts, Retrieval, and S) is not only giving you a lot more new information but also to get your friend when you truly feel bored. You can spend your spend time to read your reserve. Try to make relationship with all the book Visual Information Retrieval using Java and LIRE (Synthesis Lectures on Information Concepts, Retrieval, and S). You never feel lose out for everything should you read some books.

Maria Tate:

Information is provisions for anyone to get better life, information nowadays can get by anyone from everywhere. The information can be a expertise or any news even a problem. What people must be consider while those information which is inside former life are challenging to be find than now's taking seriously which one is appropriate to believe or which one the resource are convinced. If you have the unstable resource then you have it as your main information you will see huge disadvantage for you. All of those possibilities will not happen within you if you take Visual Information Retrieval using Java and LIRE (Synthesis Lectures on Information Concepts, Retrieval, and S) as your daily resource information.

Paul Mendosa:

A lot of people always spent their very own free time to vacation as well as go to the outside with them family or their friend. Were you aware? Many a lot of people spent many people free time just watching TV, or perhaps playing video games all day long. If you would like try to find a new activity that's look different you can read the book. It is really fun for you personally. If you enjoy the book which you read you can spent the whole day to reading a book. The book Visual Information Retrieval using Java and LIRE (Synthesis Lectures on Information Concepts, Retrieval, and S) it is rather good to read. There are a lot of individuals who recommended this book. These were enjoying reading this book. Should you did not have enough space to develop this book you can buy typically the e-book. You can m0ore easily to read this book from the smart phone. The price is not too expensive but this book offers high quality.

Rosemary Robinson:

Reading can called thoughts hangout, why? Because when you are reading a book especially book entitled Visual Information Retrieval using Java and LIRE (Synthesis Lectures on Information Concepts, Retrieval, and S) the mind will drift away trough every dimension, wandering in most aspect that maybe unfamiliar for but surely might be your mind friends. Imaging each word written in a guide then become one type

conclusion and explanation which maybe you never get before. The Visual Information Retrieval using Java and LIRE (Synthesis Lectures on Information Concepts, Retrieval, and S) giving you one more experience more than blown away your head but also giving you useful information for your better life in this era. So now let us teach you the relaxing pattern this is your body and mind will be pleased when you are finished studying it, like winning an activity. Do you want to try this extraordinary wasting spare time activity?
