Design Science Methodology for Information Systems and Software Engineering

Roel J. Wieringa

Design Science Methodology for Information Systems and Software Engineering Roel J. Wieringa

This book provides guidelines for practicing design science in the fields of information systems and software engineering research. A design process usually iterates over two activities: first designing an artifact that improves something for stakeholders and subsequently empirically investigating the performance of that artifact in its context. This “validation in context” is a key feature of the book - since an artifact is designed for a context, it should also be validated in this context.

The book is divided into five parts. Part I discusses the fundamental nature of design science and its artifacts, as well as related design research questions and goals. Part II deals with the design cycle, i.e. the creation, design and validation of artifacts based on requirements and stakeholder goals. To elaborate this further, Part III presents the role of conceptual frameworks and theories in design science. Part IV continues with the empirical cycle to investigate artifacts in context, and presents the different elements of research problem analysis, research setup and data analysis. Finally, Part V deals with the practical application of the empirical cycle by presenting in detail various research methods, including observational case studies, case-based and sample-based experiments and technical action research. These main sections are complemented by two generic checklists, one for the design cycle and one for the empirical cycle.

The book is written for students as well as academic and industrial researchers in software engineering or information systems. It provides guidelines on how to effectively structure research goals, how to analyze research problems concerning design goals and knowledge questions, how to validate artifact designs and how to empirically investigate artifacts in context – and finally how to present the results of the design cycle as a whole.

From reader reviews:

Benny Joiner:

What do you ponder on book? It is just for students since they're still students or this for all people in the world, what best subject for that? Simply you can be answered for that issue above. Every person has several personality and hobby per other. Don't to be obligated someone or something that they don't need do that. You must know how great in addition to important the book Design Science Methodology for Information Systems and Software Engineering. All type of book can you see on many methods. You can look for the internet solutions or other social media.

Donna Barragan:

Now a day folks who Living in the era everywhere everything reachable by interact with the internet and the resources in it can be true or not involve people to be aware of each data they get. How people have to be smart in obtaining any information nowadays? Of course the correct answer is reading a book. Reading a book can help people out of this uncertainty Information mainly this Design Science Methodology for Information Systems and Software Engineering book because book offers you rich information and knowledge. Of course the data in this book hundred % guarantees there is no doubt in it as you know.

Jocelyn Harper:

Do you have something that you want such as book? The guide lovers usually prefer to pick book like comic, quick story and the biggest one is novel. Now, why not seeking Design Science Methodology for Information Systems and Software Engineering that give your enjoyment preference will be satisfied through reading this book. Reading routine all over the world can be said as the way for people to know world considerably better then how they react towards the world. It can't be claimed constantly that reading habit only for the geeky man or woman but for all of you who wants to become success person. So , for all you who want to start examining as your good habit, you are able to pick Design Science Methodology for Information Systems and Software Engineering become your personal starter.

Keith Mayo:

With this era which is the greater man or woman or who has ability to do something more are more treasured than other. Do you want to become among it? It is just simple method to have that. What you have to do is just spending your time very little but quite enough to experience a look at some books. Among the books in the top checklist in your reading list is usually Design Science Methodology for Information Systems and Software Engineering. This book and that is qualified as The Hungry Hills can get you closer in getting precious person. By looking up and review this publication you can get many advantages.
