“Although, your health condition may impact your everyday life, do not let it define who you are.”

THEOPHYLLINE is used together with other medicines to treat the symptoms of asthma, bronchitis, emphysema, and other lung diseases. Theophylline belongs to a group of medicines known as bronchodilators. Bronchodilators are medicines that relax the muscles in the bronchial tubes (air passages) of the lungs. They relieve cough, wheezing, shortness of breath, and troubled breathing by increasing the flow of air through the bronchial tubes. Other Uses For This Medicine: THEOPHYLLINE is sometimes used to treat breathing problems in premature infants. Talk to your doctor about the possible risks of using this drug for your baby's condition. This medicine is available only with your doctor's prescription. Thanks and may you have a good understanding about this drug—THEOPHYLLINE. You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
