Screening: Methods for Experimentation in Industry, Drug Discovery, and Genetics

Screening: Methods for Experimentation in Industry, Drug Discovery, and Genetics

The process of discovery in science and technology may require investigation of a large number of features, such as factors, genes or molecules. In Screening, statistically designed experiments and analyses of the resulting data sets are used to identify efficiently the few features that determine key properties of the system under study.

This book brings together accounts by leading international experts that are essential reading for those working in fields such as industrial quality improvement, engineering research and development, genetic and medical screening, drug discovery, and computer simulation of manufacturing systems or economic models. Our aim is to promote cross-fertilization of ideas and methods through detailed explanations, a variety of examples and extensive references.

Topics cover both physical and computer simulated experiments. They include screening methods for detecting factors that affect the value of a response or its variability, and for choosing between various different response models. Screening for disease in blood samples, for genes linked to a disease and for new compounds in the search for effective drugs are also described. Statistical techniques include Bayesian and frequentist methods of data analysis, algorithmic methods for both the design and analysis of experiments, and the construction of fractional factorial designs and orthogonal arrays.

The material is accessible to graduate and research statisticians, and to engineers and chemists with a working knowledge of statistical ideas and techniques. It will be of interest to practitioners and researchers who wish to learn about useful methodologies from within their own area as well as methodologies that can be translated from one area to another.

From reader reviews:

Jim May:

What do you ponder on book? It is just for students since they're still students or the item for all people in the world, what the best subject for that? Just you can be answered for that query above. Every person has several personality and hobby for every other. Don't to be pushed someone or something that they don't wish do that. You must know how great in addition to important the book Screening: Methods for Experimentation in Industry, Drug Discovery, and Genetics. All type of book would you see on many options. You can look for the internet methods or other social media.

Dan Flood:

Reading a reserve tends to be new life style within this era globalization. With studying you can get a lot of information that may give you benefit in your life. Together with book everyone in this world could share their idea. Textbooks can also inspire a lot of people. Plenty of author can inspire all their reader with their story or their experience. Not only situation that share in the guides. But also they write about the knowledge about something that you need example of this. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book which exist now. The authors nowadays always try to improve their skill in writing, they also doing some investigation before they write on their book. One of them is this Screening: Methods for Experimentation in Industry, Drug Discovery, and Genetics.

Mary Cruz:

Exactly why? Because this Screening: Methods for Experimentation in Industry, Drug Discovery, and Genetics is an unordinary book that the inside of the publication waiting for you to snap this but latter it will zap you with the secret it inside. Reading this book adjacent to it was fantastic author who else write the book in such awesome way makes the content within easier to understand, entertaining technique but still convey the meaning fully. So , it is good for you because of not hesitating having this anymore or you going to regret it. This phenomenal book will give you a lot of rewards than the other book have got such as help improving your expertise and your critical thinking approach. So , still want to hesitate having that book? If I ended up you I will go to the publication store hurriedly.

Ashley Robinette:

What is your hobby? Have you heard which question when you got students? We believe that that query was given by teacher to their students. Many kinds of hobby, Every person has different hobby. So you know that little person similar to reading or as looking at become their hobby. You need to understand that reading is very important along with book as to be the point. Book is important thing to add you knowledge, except your teacher or lecturer. You discover good news or update regarding something by book. Numerous books that can you go onto be your object. One of them is actually Screening: Methods for Experimentation in Industry, Drug Discovery, and Genetics.
