Emerging Policy Issues In Synthetic Biology

Emerging Policy Issues In Synthetic Biology

Synthetic biology is at such an early stage of development that there is no uniform agreement as yet about what it actually is. To some, it represents a natural extension of genetic engineering, and therefore is “business as usual”. For others, it is a way to bring mass manufacturing out from the decades of biotechnology research. Currently the discipline is limited by the ability to synthesise Dna cost-effectively but this is a technical barrier that it is anticipated will be overcome. Synthetic biology raises a number of policy issues around R&D funding, company investment, Ppp arrangements and innovative financing, infrastructure requirements, education and training, intellectual property (Ip), regulation, and public engagement. In preparation for the continuing development and greater use of synthetic biology, some countries have started to prepare synthetic biology technical roadmaps and a global roadmap for the medium term would be an extremely useful policy tool. Technical roadmaps could both identify likely future policy requirements, and be a useful vehicle in public engagement.
