Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series)

Hubbell, Williams, Billard

Amateur astronomers who want to enhance their capabilities to contribute to science need look no farther than this guide to using remote observatories. The contributors cover how to build your own remote observatory as well as the existing infrastructure of commercial networks of remote observatories that are available to the amateur. They provide specific advice on which programs to use based on your project objectives and offer practical project suggestions. Remotely controlled observatories have many advantages—the most obvious that the observer does not have to be physically present to carry out observations. Such an observatory can also be used more fully because its time can be scheduled and usefully shared among several astronomers working on different observing projects. More and more professional-level observatories are open to use by amateurs in this way via the Internet, and more advanced amateur astronomers can even build their own remote observatories for sharing among members of a society or interest group.

Endorsements:

“Remote Observatories for Amateur Astronomers Using High-Powered Telescopes from Home, by Jerry Hubbell, Rich Williams, and Linda Billard, is a unique contribution centering on computer-controlled private observatories owned by amateur astronomers and commercialized professional–amateur observatories where observing time to collect data can be purchased. Before this book, trying to piece together all of the necessary elements and processes that make up a remotely operated observatory was daunting. The authors and contributors have provided, in this single publication, a wealth of information gained from years of experience that will save you considerable money and countless hours in trying to develop such an observatory.

If you follow the methods and processes laid out in this book and choose to build your own remotely operated observatory or decide to become a regular user of one of the commercial networks, you will not only join an elite group of advanced astronomers who make regular submissions to science, but you will become a member of an ancient fraternity. Your high-technology observatory will contain a “high-powered telescope” no matter how large it is, and from the comfort of home, you can actively contribute to the work that started in pre-history to help uncover the secrets of the cosmos.”

Scott Roberts

Founder and President, Explore Scientific, LLC.

“In the past three and a half decades, since I first became involved with remote observatories, the use of

remote, unmanned telescopes at fully automated observatories has advanced from a very rare approach for making astronomical observations to an increasingly dominant mode for observation among both professional and amateur astronomers. I am very pleased to see this timely book being published on the topic.

I highly recommend this book to readers because it not only covers the knowledge needed to become an informed user of existing remote observatories, but also describes what you need to know to develop your own remote observatory. It draws on more than two decades of remote observatory operation and networking by coauthor Rich Williams as he developed the Sierra Stars Observatory Network (SSON) into the world-class network it is today. This book is the ideal follow-on to coauthor Jerry Hubbell's book *Scientific Astrophotography* (Springer 2012).

Remote observatories have a bright future, opening up astronomy to a new and much larger generation of professional, amateur, and student observers. Machines and humans can and do work well together. I hope you enjoy reading this book as much as I have and will take advantage of the developments over the past several decades by the many pioneers of remote observatories."

Russ Genet, PhD.

From reader reviews:

Charles Denzer:

Book is to be different for each grade. Book for children until finally adult are different content. As we know that book is very important for us. The book Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series) was making you to know about other know-how and of course you can take more information. It is rather advantages for you. The reserve Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series) is not only giving you far more new information but also to become your friend when you experience bored. You can spend your spend time to read your guide. Try to make relationship with all the book Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series). You never feel lose out for everything should you read some books.

Pat Swartz:

This Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series) are usually reliable for you who want to be a successful person, why. The key reason why of this Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series) can be one of several great books you must have is giving you more than just simple studying food but feed a person with information that perhaps will shock your before knowledge. This book is usually handy, you can bring it all over the place and whenever your conditions in the e-book and printed versions. Beside that this Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series) giving you an enormous of experience such as rich vocabulary, giving you tryout of critical thinking that we know it useful in your day action. So , let's have it and enjoy reading.

Mary Burnette:

Playing with family in a very park, coming to see the water world or hanging out with good friends is thing that usually you will have done when you have spare time, and then why you don't try point that really opposite from that. Just one activity that make you not experience tired but still relaxing, trilling like on roller coaster you already been ride on and with addition details. Even you love Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series), you are able to enjoy both. It is fine combination right, you still need to miss it? What kind of hang-out type is it? Oh occur its mind hangout men. What? Still don't buy it, oh come on its identified as reading friends.

Kimberly Towe:

Don't be worry for anyone who is afraid that this book can filled the space in your house, you may have it in e-book means, more simple and reachable. This specific Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series) can give you a lot of friends because by you taking a look at this one book you have factor that they don't and make anyone more like an interesting person. This

particular book can be one of one step for you to get success. This reserve offer you information that probably your friend doesn't realize, by knowing more than additional make you to be great people. So , why hesitate? Let's have Remote Observatories for Amateur Astronomers (The Patrick Moore Practical Astronomy Series).
