Rice Insects: Management Strategies (Springer series in experimental entomology)

Due to the worldwide importance of rice as a crop plant, the biology of rice pests is of great interest to agricultural research. This book brings together contributions from the fields of entomology, agronomy, population ecology and biostatistics to provide a comprehensive survey of rice-insect interaction. Among the topics discussed are crop loss assessment, economic thresholds and injury levels for insect pests, mosquito leafhoppers and planthoppers population, dynamics, pheromone utilization, techniques for predator evaluation, chemical bases for insect resistance, applications of tissue culture, systems analysis and rice pest management. With its emphasis on experimental techniques of pest analysis and control, "Rice Insects: Management Strategies" is intended to be a useful reference for researchers and practitioners.
